

## DESCRIPTION:

CSG 4000 is a powerful 100% organic solvent blended specifically for rapid and safe cleaning of grease traps and drain pipes. It contains deep penetrating citrus solvent plus emulsifiers for rapid dissolving and breakup of grease and oils. Water rinsability is achieved by coupling agents that disperse soil particles and allow complete flushing of surfaces.

CSG 4000 contains no petroleum solvents or harmful chlorinated solvents like orthodichlorobenzene which have been used in grease traps. This means a more "environmentally safe" product which can be safely flushed to most waste treatment systems (check with local authorities first). No need for hot water. CSG 4000 works quickly and completely in cold water.

CSG 4000 has hundreds of other uses too. It is an excellent cleaner for heavy machinery, engines, road tar or anywhere oil and grease is a problem.

CSG 4000 offers the following advantages:

- ▶ **100% Organic Formula** - Every ounce goes to work immediately and completely.
- ▶ **Added Detergents** - Water rinsing is easy. No plugging or sticking.
- ▶ **No Petroleum or Chlorinated Solvents** - Environmentally safer to use.
- ▶ **Pleasant Citrus Odour** - Cleans and leaves refreshing after-aroma.
- ▶ **Liquid Concentrate** - May be water diluted or metered for use.

## USE APPLICATIONS:

CSG 4000 was designed for use in grease trap and drain cleaning but has many other uses. It will penetrate and clean greases, oils, tars, etc. like no water-based cleaner can. Best results are obtained when using full strength but for many clean ups, a dilution with up to 5 parts water produces excellent results.

## APPLICATION:

As a grease trap or drain cleaner, may be added as required down the drain or by automatic pump feed. Daily use of small quantities normally will prevent clogging whereas large slugs may be required to remove buildup.

For cleaning road machinery, automotive engine parts, road tar, garage floors, etc. dilute with up to 3 parts of water. Apply liberally by spraying, pouring or wiping on surface. Allow 5 - 10 minutes contact time agitating with brush or cloth if necessary. Flush clean with water. Note: Always test painted or enamelled surfaces first to determine product safety.

## TYPICAL SPECIFICATIONS:

**Form:** Liquid

**Colour:** Colourless/Straw

**% Non Volatile:** 5.1%

**Solvents:** Organic Citrus

**Flash Point:** 50°C

**Water Solubility:** Emulsifiable

**Odour:** Low
