

# AIRX100

## 100% ODOR COUNTERACTANT

This unique product consists of a concentrated blend of Airicide™ plus other odor counteractants in pure, 100% active form, nothing more, nothing less. There is no water, no alcohol, no petroleum distillate, no propellant, nothing to dilute the product's superior effectiveness. A single shot of AIRX 100 from a trigger sprayer gives immediate relief from the most offensive of foul odors, and because AIRX 100 is so much more concentrated than other products, it lasts for hours, not just minutes.

### DESCRIPTION

AIRX 100 is an institutional strength odor counteractant in pure 100% undiluted form. It is super strong for immediate action and for long lasting effectiveness against the most vile of odors.

### FOR USE IN

For neutralizing and eliminating the most vile odors of all kinds, from all sources including putrid odors from decay, human incontinence, sickness, garbage, sewage, spoiled food, dirty linens, soiled bandages, diapers, fermentation, chemicals, etc.

### BENEFITS

*100% ACTIVE* - No dilutents, no fillers, no propellants - just 100% odor counteractant in pure form. There's really no comparison with other products. The best known aerosol deodorant contains 20% propellant, 79% alcohol and only 1% deodorant.

*CONTAINS Airicide™* - This proprietary odor counteractant merges with and changes the shape of odorous molecules in the air so that they are not received and perceived as unpleasant when they reach the nose.

*INSTITUTIONAL STRENGTH* - AIRX 100 will erase the most vile of foul odors under the worst of conditions, yet it will not overwhelm the area with its own fragrance and can be used almost anywhere.

*VARIED APPLICATIONS* - May be sprayed in the air as a space spray, sprayed directly on the source of foul odors, used with slow release canisters, added to solvent base products like paints, cutting oils, petroleum degreasers, etc.

*ECONOMICAL* - A single 1L bottle will deliver more than a thousand individual shots of pure counteractant for pennies a treatment.

*IMMEDIATE ACTION* - With the first squeeze of the trigger sprayer, the citrus

scented odor counteractants in AIRX 100 begin to subdue foul odors, while Airicide™ merges with odorous molecules in the air, so that they will not be recognized as unpleasant when they reach the nose.

*STAYING POWER* - Tests show that a single spray of AIRX 100 eliminates foul odors for hours whereas the typical aerosol spray lasts for just minutes.

### DIRECTIONS

*AS A SPACE SPRAYER* - Place AIRX 100 in a trigger sprayer, and rotate the nozzle to dispense a fine mist. Point the sprayer away from the face and towards the ceiling and then spray AIRX 100 into the air. Use sparingly - one spray eliminates most odors and lasts for hours.

*AS AN ADDITIVE* - Pour a small amount into the source of foul odor (i.e. paints, cutting oils, petroleum degreasers, etc).
