"OUR REPUTATION IS SPOTLESS"

GREEN CLEANING

CLEANING CHEMICALS, EQUIPMENT AND SUPPLIES SINCE 1923

GREEN CLEANING WITH W.E. GREER LTD.

More businesses are becoming environmentally savvy. LEED (Leadership in Energy and Environmental Design) certified buildings are on the rise, and companies that offer cleaning systems that target these types of cleaning environments will be ahead of the curve.

Our "Green Cleaning" brochure highlights products that are considered "green". But what does that mean to us? We know that anyone can call a product green, so the majority of products we recommend are backed up by a third party certification.

Certifications:

EcoLogo™ (ecologo.org) - EcoLogo is Canada's official mark of environmental leadership. The program ensures that products being advertised as "Environmentally Friendly" adhere to strict guidelines that ensure a truly environmentally friendly product. Meets international ISO 14024 standard for environmental labels.

FSC® (fsccanada.org) - The Forestry Stewardship Council provides a structure for best forestry management practices, including protection of high conservation value forests, protection of waterways, respect of Aboriginal and local communities, and protection of natural wildlife habitats.

Green Seal® (greenseal.org) - Green Seal products contain 100% recycled fiber and 65% post-consumer materials by fiber weight. They also meet strict environmental standards for bleaching, deinking and packaging; and contain no added inks, dyes, or fragrances.

Growing Green™ - Merfin's own seal for products that contain 100% recycled paper, and do not use chlorine or similar chemicals in the paper making process that are harmful to the environment.

Carpet and Rug Institute Seal (carpet-rug.org) - The CRI monitors equipment for air quality, noise pollution and chemical efficiency to ensure healthy and environmentally friendly cleaning.

CLEANING CHEMICALS

INDO Pro-Portion EV:

Our EcoLogo certified EV products are designed to provide a complete cleaning system for commercial and industrial sites. EV products are: readily biodegradable, have no ozone depletion potential, have no harmful fumes or hidden toxins, do not contain phosphates, do not contain dyes or fragrances.

Going Low VOC

Volatile Organic Compounds (VOCs) are as ubiquitous in indoor environments as dandelions are on lawns. There is no way to completely avoid them when they come from everything from paints and strippers, to photocopiers, and even the copy paper.

VOCs can cause a variety of health problems, therefore, it is important to cut down on VOCs entering a facility where possible.

All our EV products are low/no VOC, making them ideal for a cleaning program that promotes a healthy indoor environment.

EV Products	1.9L	4L	20L
EV Hurricane Washroom Cleaner	250905	250908	
EV Rain Glass Cleaner	250900		
EV Tornado Spray & Wipe Cleaner	250910	250913	250912
EV Red Rock Neutral Floor Cleaner	250915		250916
EV Sunrise Disinfectant	250920		250921

DILUTION CONTROL

An integral part of an green cleaning program is dilution control. Dilution control prevents the overuse of cleaning chemicals, saving money and minimizing impact on the environment.

We offer a variety of different tools that will dilute cleaning chemical, including the Taskmizer, Multiflex, and Hydro Foamer.

Also, many Nilfisk-Advance machines (back page) offer EcoFlex dilution control systems, and the Hillyard C3XP (next page) is also a mobile dilution control system.

PLASTIC

All Polykar bags are EcoLogo certified. The bags contain 100% recycled material and are recyclable.

Polykar also manufactures a line of biodegradable and oxodegradable bags, which may be special ordered upon request. For more information, please speak with one of our Consultants.

PAPER

We carry a wide range of FSC and EcoLogo certified paper, most containing 100% recycled content.

Combine "green" paper, with dispensers that control the amount of product being pulled, and you have a system which minimizes waste and resources.

TOOLS

Microfibre:

Microfibre cloths and mops help reduce cleaning chemical usage and water waste. Microfibre uses a capillary action and a positive charge to draw dust and dirt in, and can pick up soil as small as bacteria. When used as recommended, microfibre minimizes the risk of cross contamination. It is also extremely durable — microfibre cloths and mops can be washed between 500 and 1000 times, compared to the 55 to 200 times for conventional cloths.

MICROFIBRE CLOTHS	
Red, 14" x 14"	56A50103E
Blue, 14" x 14"	560077
Green, 13" x 14"	560063
Yellow, 13" x 14"	560062

MICROFIBRE MOP PADS	12"	20"

Orange	619294	619300

MICROFIBRE ACCESSORIES	12"	20"
Frame	619295	619296
Handle, Telescopic, 40" to 71" (fits all)	619299	

Matting Systems:

Reduce cleaning time and chemical use with a good entrance matting system. Mats can trap up to 80% of the dirt coming through the door. Less dirt means less cleaning product and water required to clean the area.

Speak with one of our Consultants regarding customized matting options, including logo printing.

Touch Free Washroom Cleaning:

The C3XP Touch Free Washroom Cleaner is an ideal tool for reducing water waste, while using on-board dilution control to minimize the chemical required to do the job.

EQUIPMENT

Tennant Co. manufactures a wide variety of cleaning equipment for commercial and industrial facilities. Many of the machines have features that are ideal for environmentally friendly cleaning programs:

CRI Certification (carpet-rug.org): The Carpet and Rug Institute awards certification to carpet equipment that meets rigid specifications for air quality, noise pollution, and chemical efficiency.

Multi Level Filtration: Multiple levels of filtration help to clean the air that is pulled through the machine, increasing air quality.

HEPA: HEPA filters are able to filter out up to 99.97% of all particles greater than 0.3 micrometer from the air that passes through it.

ec-H2O and ec-H2O NanoClean: Reduce, and in some cases, eliminate the use of cleaning chemicals with ec-H2O technology. This innovative feature on many Tennant scrubbers turns water into an effective and cost-efficient cleaner. ec-NanoClean technology is National Floor Safety Institute (NFSI) certified, may contribute to LEED or LEED-EBOM certification, and is independantly tested and by NSF international, a public health and safety organization.

ReadySpace®: This technology allows carpet cleaning equipment to turn around an area in a reduced amount of time. The technology reduces moisture, also reducing risk of moisture-seeking moulds and mildews.

In addition, most battery powered equipment can be ordered with Gel and AGM batteries, which last longer, do not require maintenance, and reduce resources and waste during production.
